Information Technology Services

Information technology (IT) has become a mission-critical function for businesses. As a result, many firms rely on outside experts to perform this role or to enhance in-house capabilities. As a natural outgrowth of our services to tax and accounting clients, EisnerLubin offers a robust IT consulting practice.

There are many capable IT consultants available who can simply fix problems. But if you are a small- to mid-sized company seeking solutions and answers through close, personal connections, look no further. EisnerLubin's trouble-shooting approach allows us to quickly diagnose and fix problems and, more importantly, to identify and correct potential problems before they hurt your business. Our consultants communicate in plain English and address client concerns by discussing issues in a way that makes sense.

EisnerLubin's IT Consulting Services Practice specializes in the following areas:

- Software evaluation, consulting, implementation
- Network management
- Server configuration/management
- Server and workstation virtualization
- Office application support
- Personal/small office/home office computer set-up and support
- Data backup and archiving solutions

The following technical project management services are also available:

- Web application roll-outs
- Web application development
- Disaster recovery systems
- Database design
- Telephone solutions
- Network design/deployment
- Data/network security and planning
